

PRESENTATION

Next generation Life 4.0 and environmental solutions

Senstate Technologies
www.senstate.com

First of a kind solution

FULLY CENTRALIZED, NEXT GENERATION SOFTWARE INFRASTRUCTURE OF SERVICES AND APPLICATIONS
FOR COMPLETE MANAGEMENT OF SENSORY NETWORKS AND CITY'S DATA

Senstate IntelligentCity IT Infrastructure

Modern centralized system for managing
city's sensory networks

Intelligent City Platform

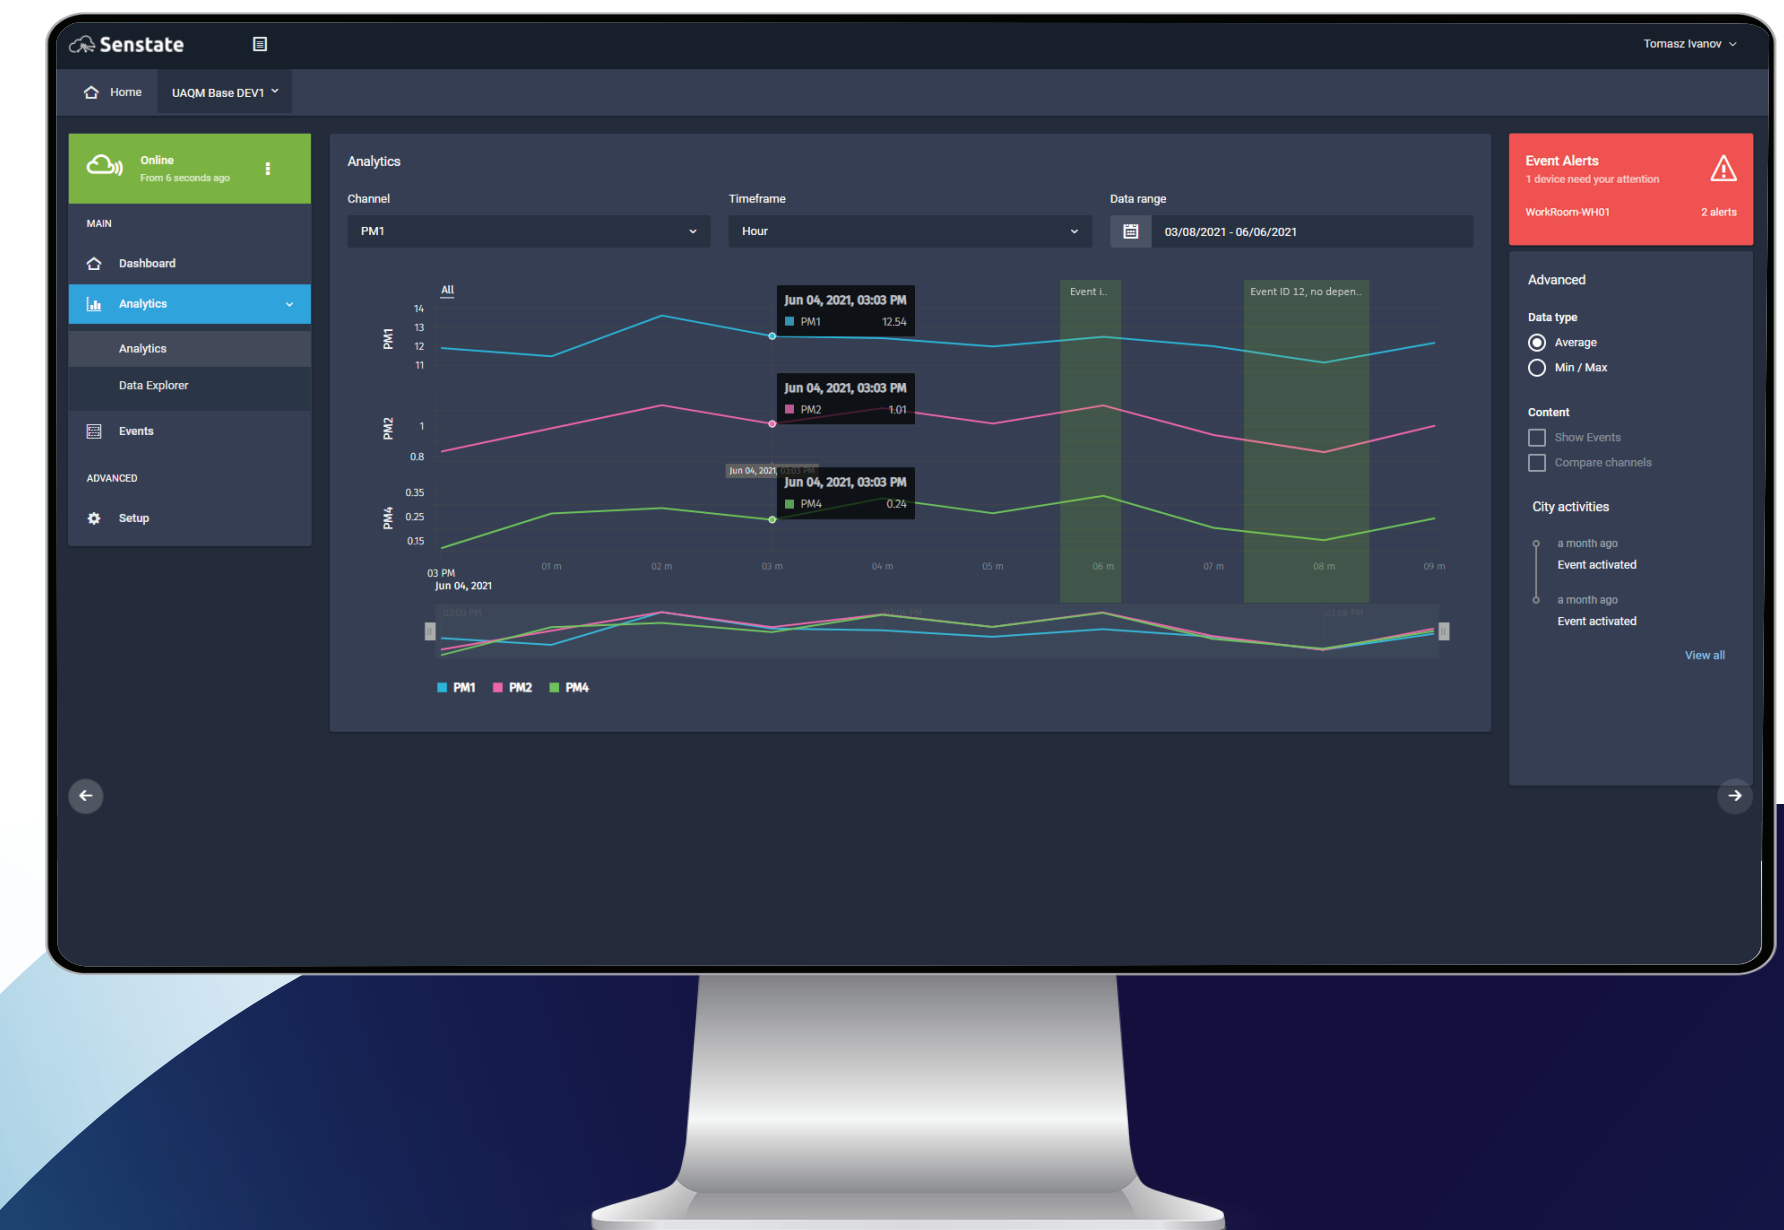

MODERN SAAS PLATFORM FOR THE USE OF ALL STAKEHOLDERS IN THE INTELLIGENT CITIES OF THE FUTURE:
URBAN PLANNING EXPERTS, ENVIRONMENTAL SPECIALISTS, RISK MANAGERS, CITY MANAGEMENT AUTHORITIES

Distinctive Features

-  **Rich dashboards**
For visualizing variety of environmental data for cities
-  **AI Trend Detection**
For getting insights that cannot be detected in other ways
-  **AI Anomaly Detection**
For immediate actions and early event notifications
-  **Events and Alerts**
To allow instant notifications in case of pollution or anomalies
-  **Powerful Data Analytics**
To visualize data in the form of charts, diagrams and datatables
-  **Open Data Access**
To allow the building of third-party solutions with city's data in their core

Platform Technologies

-  AI (Artificial Intelligence) models for correlation analyses, trend identification and prediction
-  Modern multi-platform scalable service-oriented architecture
-  Distributed data endpoint concept to allow ultra-fast data access and high reliability
-  Open APIs for building third-party solutions
-  M2M (Machine-to-machine) communication technology and device interaction protocols

Dedicated Management System

SYSTEM FOR COMPLETE MANAGEMENT OF INTELLIGENT CITY'S NETWORK OF DEVICES, USERS, DATA INTEGRATIONS AND SERVICES

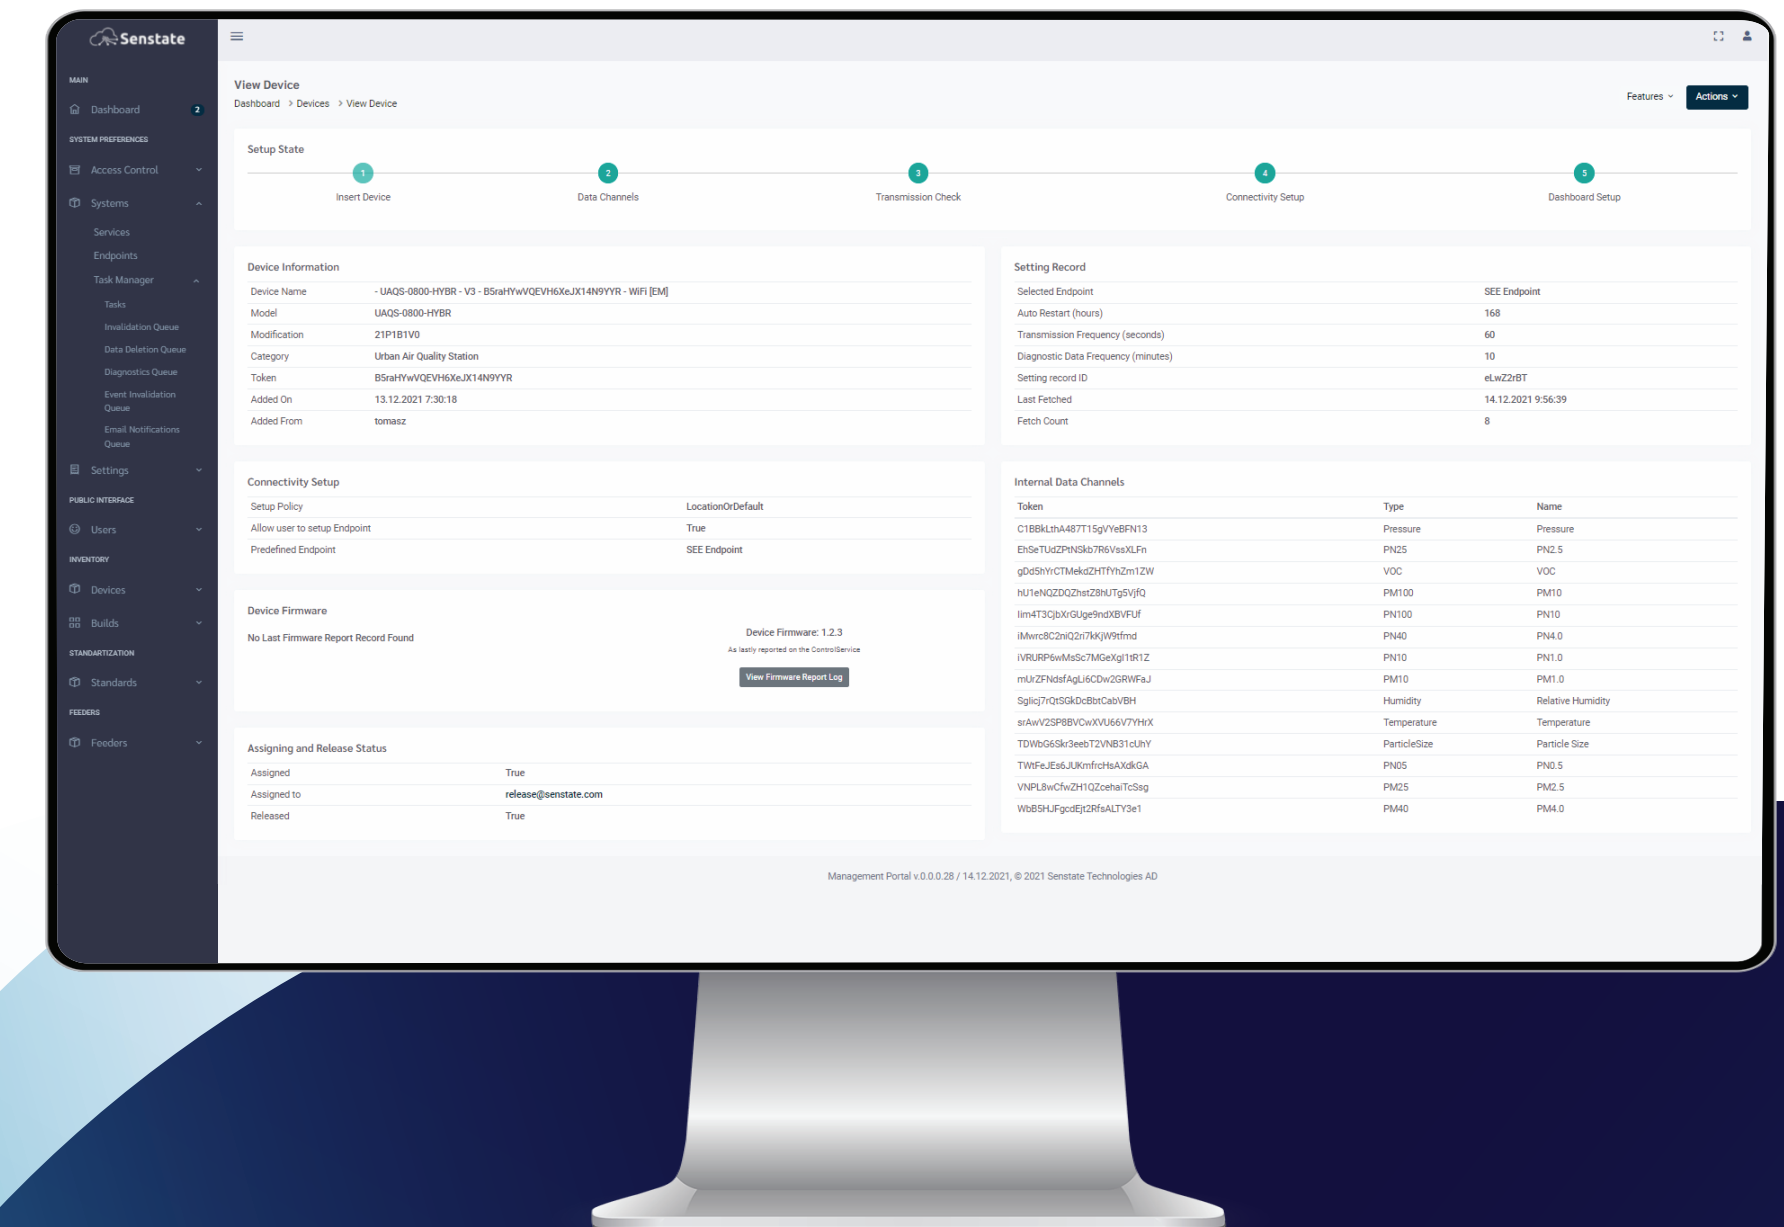

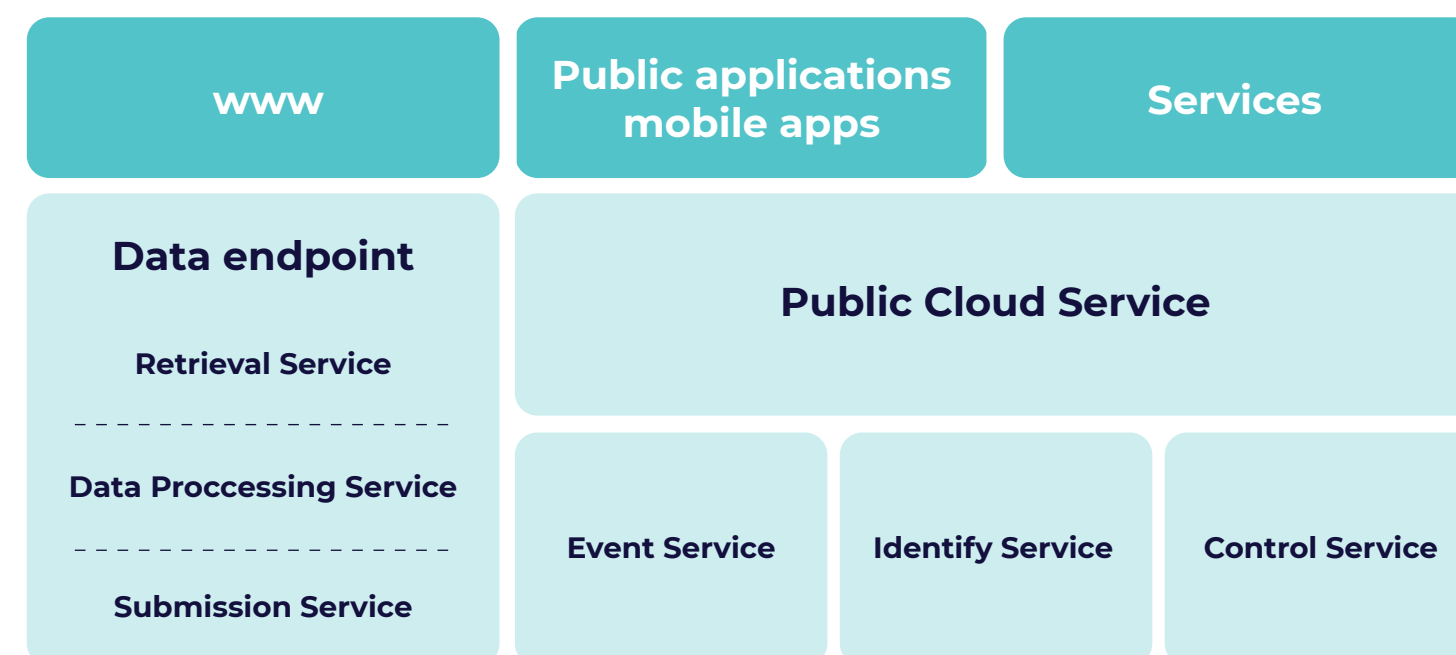

City's Digital Assets

Manage all cities sensory networks in one platform

Next generation software infrastructure

Urban Air Quality Monitoring

COMPLETE SOLUTION FOR MONITORING OF AIR QUALITY IN CITIES

PRECISE SENSOR SYSTEM IN FULL COMPLIANCE WITH EUROPEAN AIR QUALITY REGULATIONS, PROVIDING INSTANT REAL-TIME INFORMATION ON POLLUTION LEVELS ACCORDING TO THE ADOPTED DIRECTIVES, AS WELL AS CALCULATION OF THE EUROPEAN AIR QUALITY INDEX.

Increasing awareness about the Air Quality problems. Supporting the creation of an innovative and digital ecosystem through public data interfaces and cloud services.

Air Quality Station Senstate UAQS

- ✓ Precise sensor system in full compliance with European regulations
- ✓ 24/7 real-time monitoring
- ✓ Cloud based data visualization and data analysis system

Gases Detection

Particulate Matter Detection

Background Noise Monitoring

24/7 data in real time

Benefits

- ✓ Obtaining comprehensive information on air quality
- ✓ Informing the population in case of increased pollution rates
- ✓ Immediate identification of pollutants and areas with increased pollution
- ✓ Creating a sense of security and awareness among citizens
- ✓ Increasing the interaction between citizens and the municipality
- ✓ Identification of periods of anomalies or increased pollution
- ✓ A significant step in implementing zero-emission policies

Track and localize air pollution to continuously verify compliance with the EU and WTO regulations and guidelines. Show you are a responsible city taking advantage of the latest technologies to ensure the health and well-being of citizens.

Water Resources Monitoring

COMPLETE SOLUTION FOR WATER QUALITY AND WATER LEVEL MONITORING

INTEGRATED REAL-TIME WATER QUALITY MONITORING SYSTEM FOR RIVERS, LAKES AND DAMS.
WATER LEVEL MONITORING AND EARLY FLOOD RISK OR LOW LEVEL IDENTIFICATION

The management of water resources in cities is essential for the ecological, economic and social development of the territories. Statistics show that by 2030, the world will have a 40% shortage of water resources. Lack of attention to the importance of water in urban planning, urbanization and rapid growth most often contributes to imbalances in sustainable water management

Water Quality Monitoring Station **Senstate WQMS**

- ✓ Precise sensor system for measuring the main parameters of water quality
- ✓ Ultrasonic technology for monitoring the level of water basins
- ✓ 24/7 real-time data and cloud-based tools for data analysis and visualization

- Real-time measurement of parameters like pH, ORP, Conductivity, Turbidity and others.
- Permanent or mobile measurement by relocation
- Real-time basin level monitoring with ultra-precise sonar technology
- Water quality Index
- Early identification of anomalies

Benefits

- ✓ 24/7 water quality information
- ✓ Precise and instant localization of subjects of pollution
- ✓ Real-time data on water level
- ✓ Early identification of flood or drying risks
- ✓ Statistics for the purposes of more effective water resources management

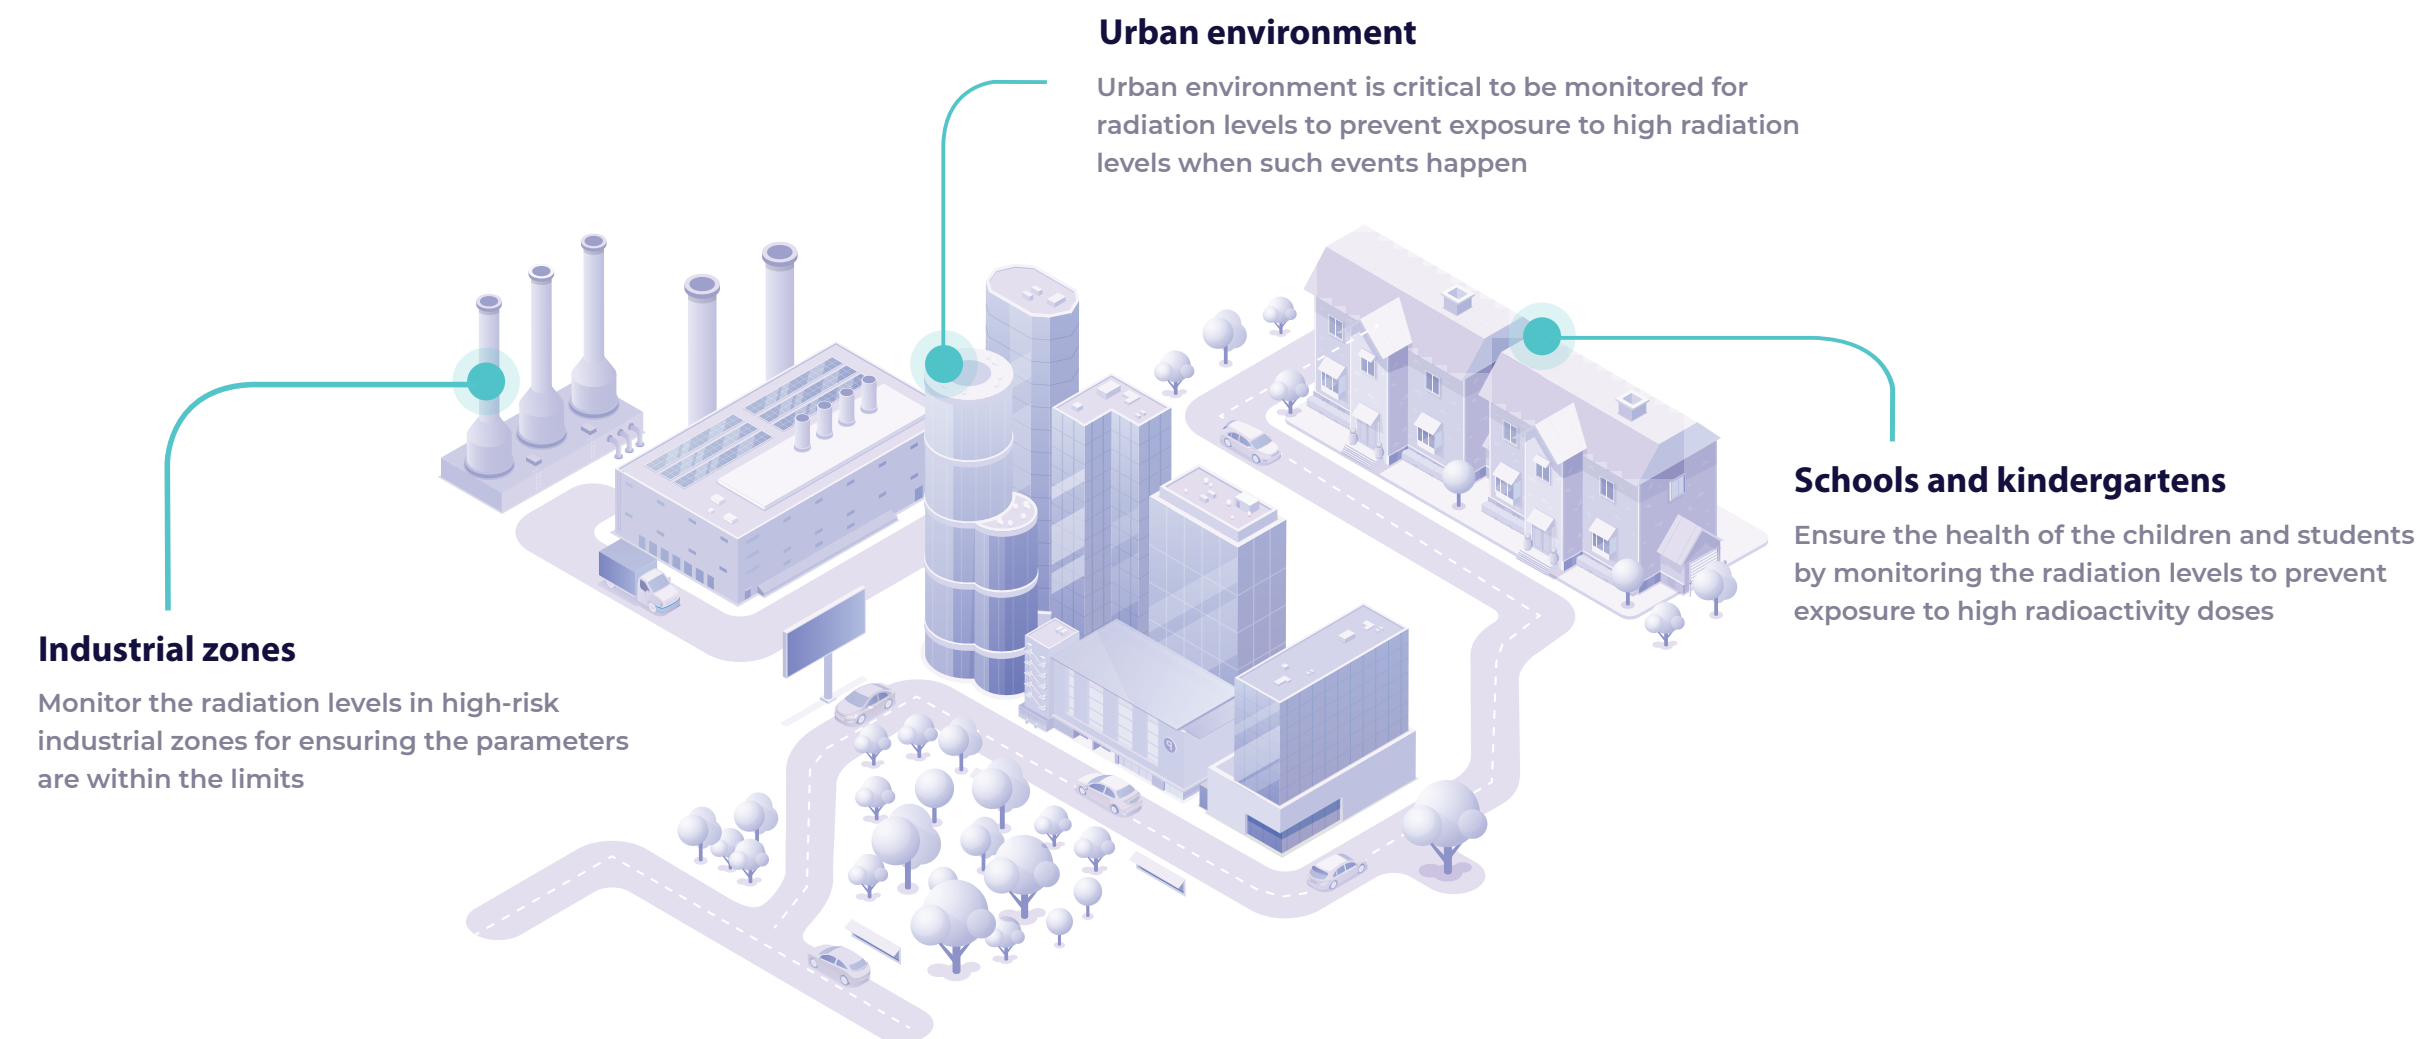

Acquire an essential water resource monitoring system for achieving effective and sustainable management of the water resources in the city and implement modern solution for early warning of risks.

Environmental Radiation Monitoring

COMPLETE SOLUTION FOR MONITORING RADIATION LEVELS IN INDOOR AND OUTDOOR CONDITIONS

REAL-TIME MONITORING OF ENVIRONMENTAL RADIATION FOR RADIOACTIVITY DETECTION AND EARLY WARNING OF RISKS

Background Radiation Monitor Senstate BRM

- ✓ Precision radiation detection
- ✓ 24/7 real-time monitoring
- ✓ Cloud based data visualization and data analysis system

Early warning and public data reporting

Use the build-in features for alarms and events in the Cloud system to instantly notify the respective users about reaching predefined radiation levels or integrate with any third-party systems through our API.

Use Open Data to implement public data reporting in environmental portals, web apps, live maps or build simple widgets that can be used in websites or interactive dashboards.

Ensure the safe environment conditions of the population and track the radiation dose in compliance with the radiation safety regulations. Detect instantly anomalies or high radiation levels to react instantly on any risks related to radiation pollution.

Background Noise Monitoring

COMPLETE SOLUTION FOR MONITORING BACKGROUND NOISE IN CITIES

MONITOR AND LOCALIZE NOISE POLLUTION IN THE URBAN AREAS, TRACK COMPLIANCE WITH THE REGULATIONS AND KNOW THE NOISE PROFILE IN THE CITY

Background Background Noise Monitor **Senstate BNM**

- ✓ Precision noise detection
- ✓ 24/7 real-time monitoring
- ✓ Cloud based data visualization and data analysis system

Benefits

- ✓ Know the noise profile in any location of the city for accumulating knowledge for more effective policies and measures in the field of urban planning
- ✓ Detect anomalies and violations to react quickly and take measures
- ✓ Create engagement in citizens by broadcasting real-time noise data in your municipality's website, on public maps or other apps
- ✓ Track compliance of local and national regulations for the noise levels to ensure your city has adopted all required measures to be in sync with the policies

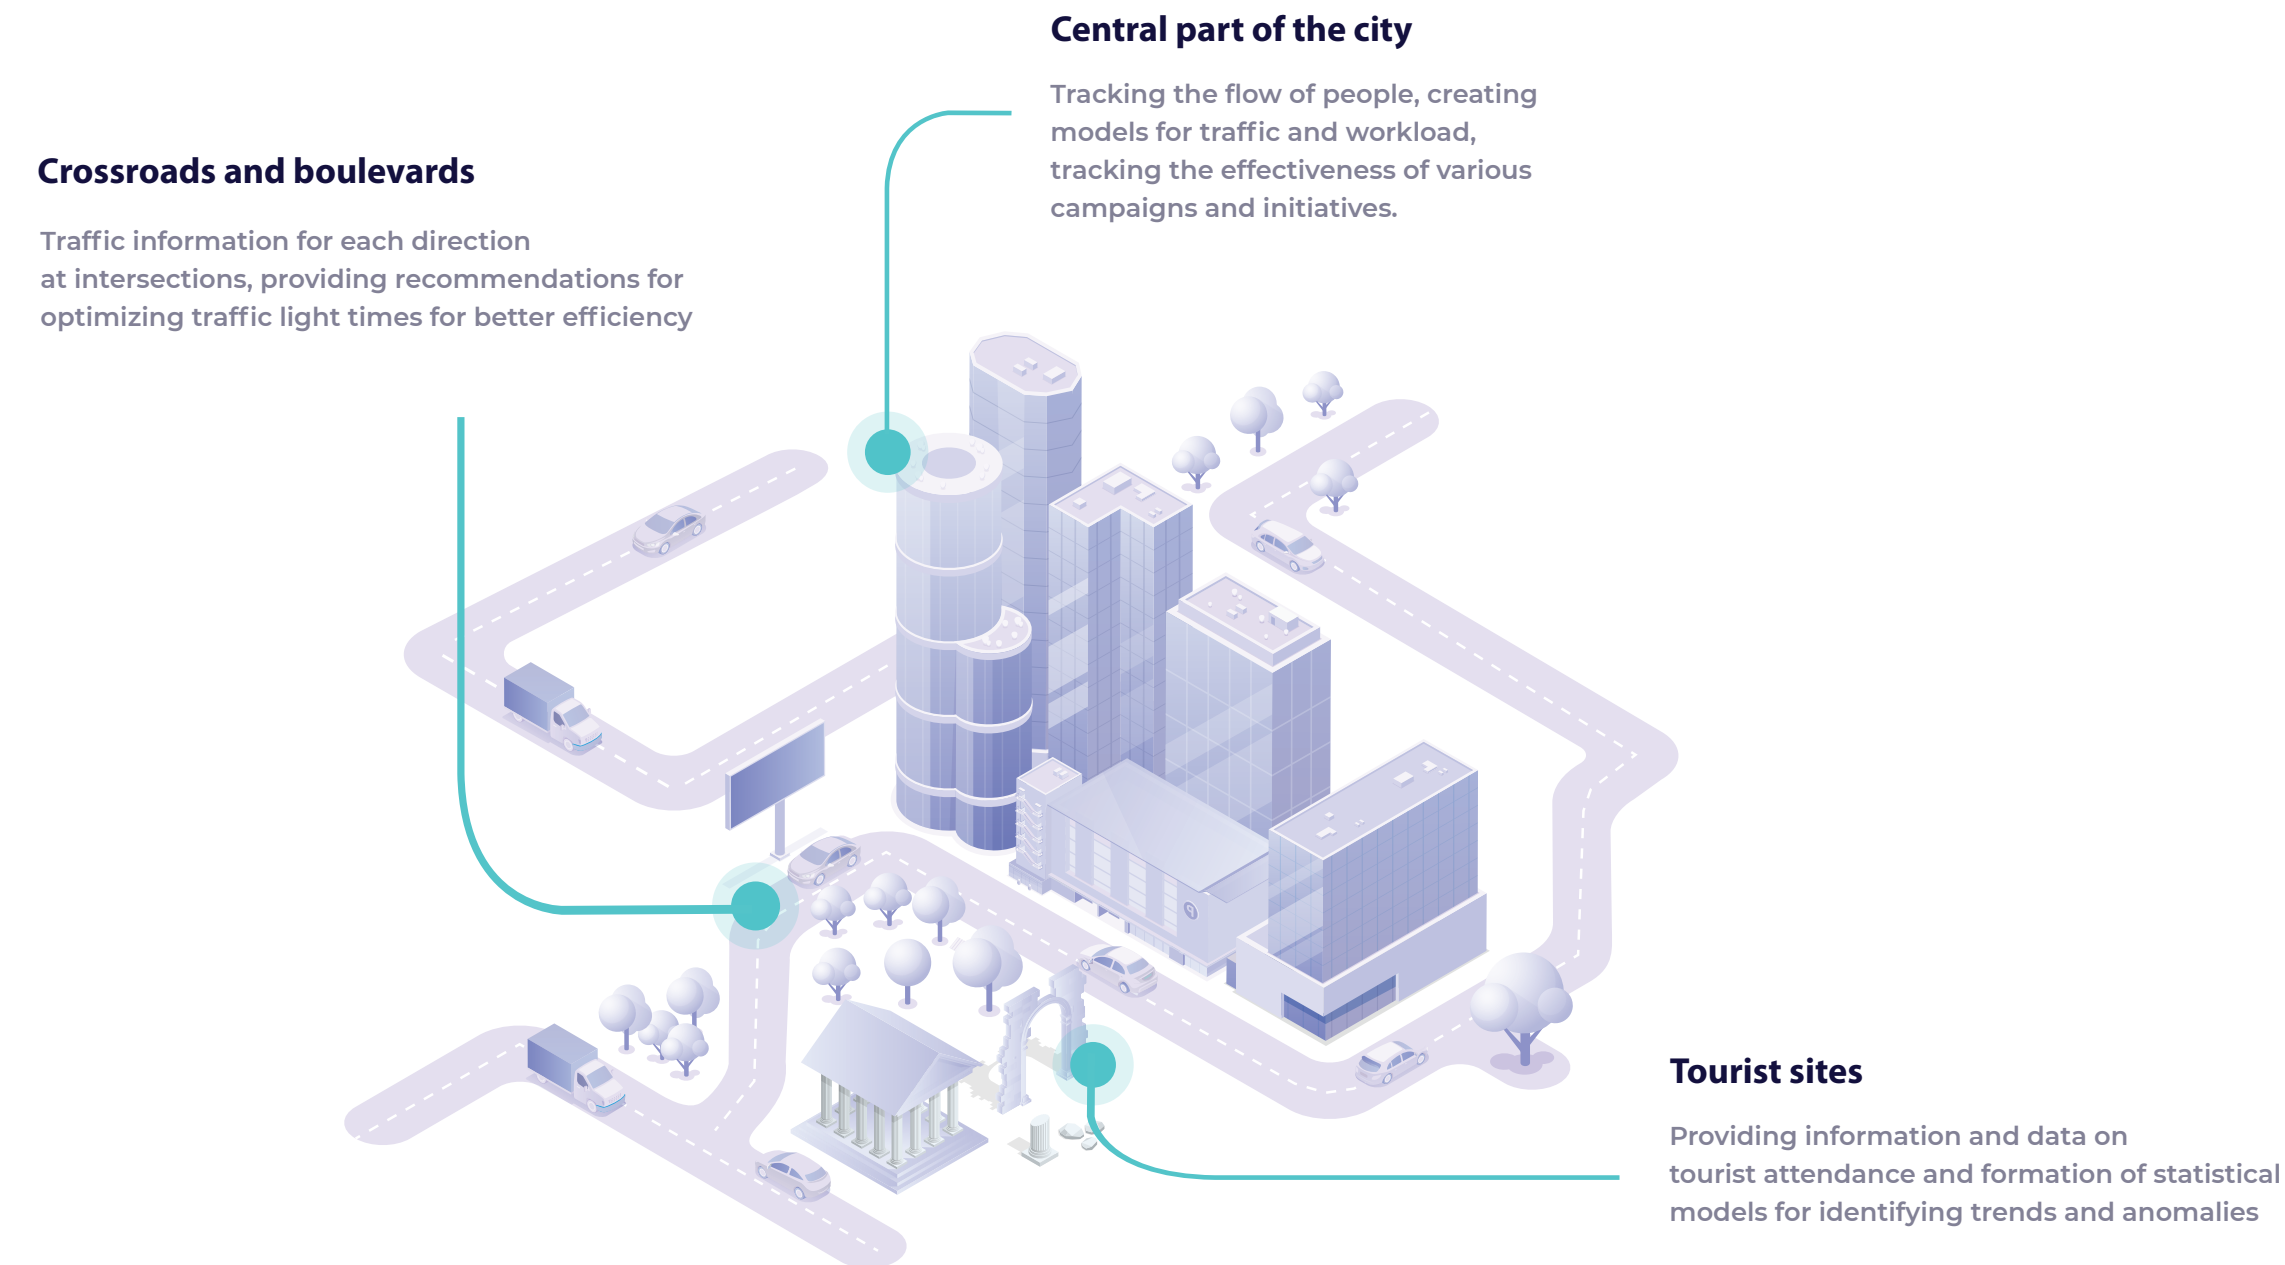

Monitor the noise levels in urban areas, parks and green areas and residential areas to ensure compliance with the regulations. Create noise maps and identify problematic areas to fight high environmental noise levels with policies and measures.

Intelligent Traffic

COMPLETE SOLUTION FOR MONITORING OF THE TRAFFIC PROFILE IN URBAN ENVIRONMENTS

COMPREHENSIVE MONITORING OF THE WORKLOAD PROFILE WITH SUBJECTS FROM THE TRAFFIC ENVIRONMENT - BICYCLES, CARS AND TRUCKS, PEDESTRIANS AND PUBLIC TRANSPORT FOR THE PURPOSES OF MORE EFFICIENT URBAN PLANNING AND DATA DRIVEN DECISION-MAKING.

Edge Station for Intelligent Traffic **Senstate IETS**

- ✓ EDGE technology for real-time video image analysis
- ✓ Detection and traceability of traffic objects
- ✓ 24/7 real-time data and cloud-based tools for data analysis and visualization

Which are the traffic profile elements/actors

Statistical data in different sections:
by days, by hours of the day, by periods of the year, during events, etc.

Benefits

- ✓ Obtaining comprehensive information about the traffic load profile
- ✓ Identification of places with a conflict profile and identifying trends
- ✓ Accumulation of statistical data for all objects in the traffic
- ✓ Better urban planning decisions
- ✓ Better investment decisions
- ✓ Optimization of traffic light systems and traffic restriction systems
- ✓ Significant innovation in line with the trend for digitalization of cities and industries

 **Senstate**

Intelligent traffic solutions contribute to efficiency and security in urban environments, as well as provide relevant information for better governance and environmental protection policies and decisions.

Creating engagement in citizens

MOBILE APPS, LIVE DASHBOARDS AND OTHER INTERACTIVE TECHNOLOGIES FOR CREATING ENGAGEMENT IN CITIZENS

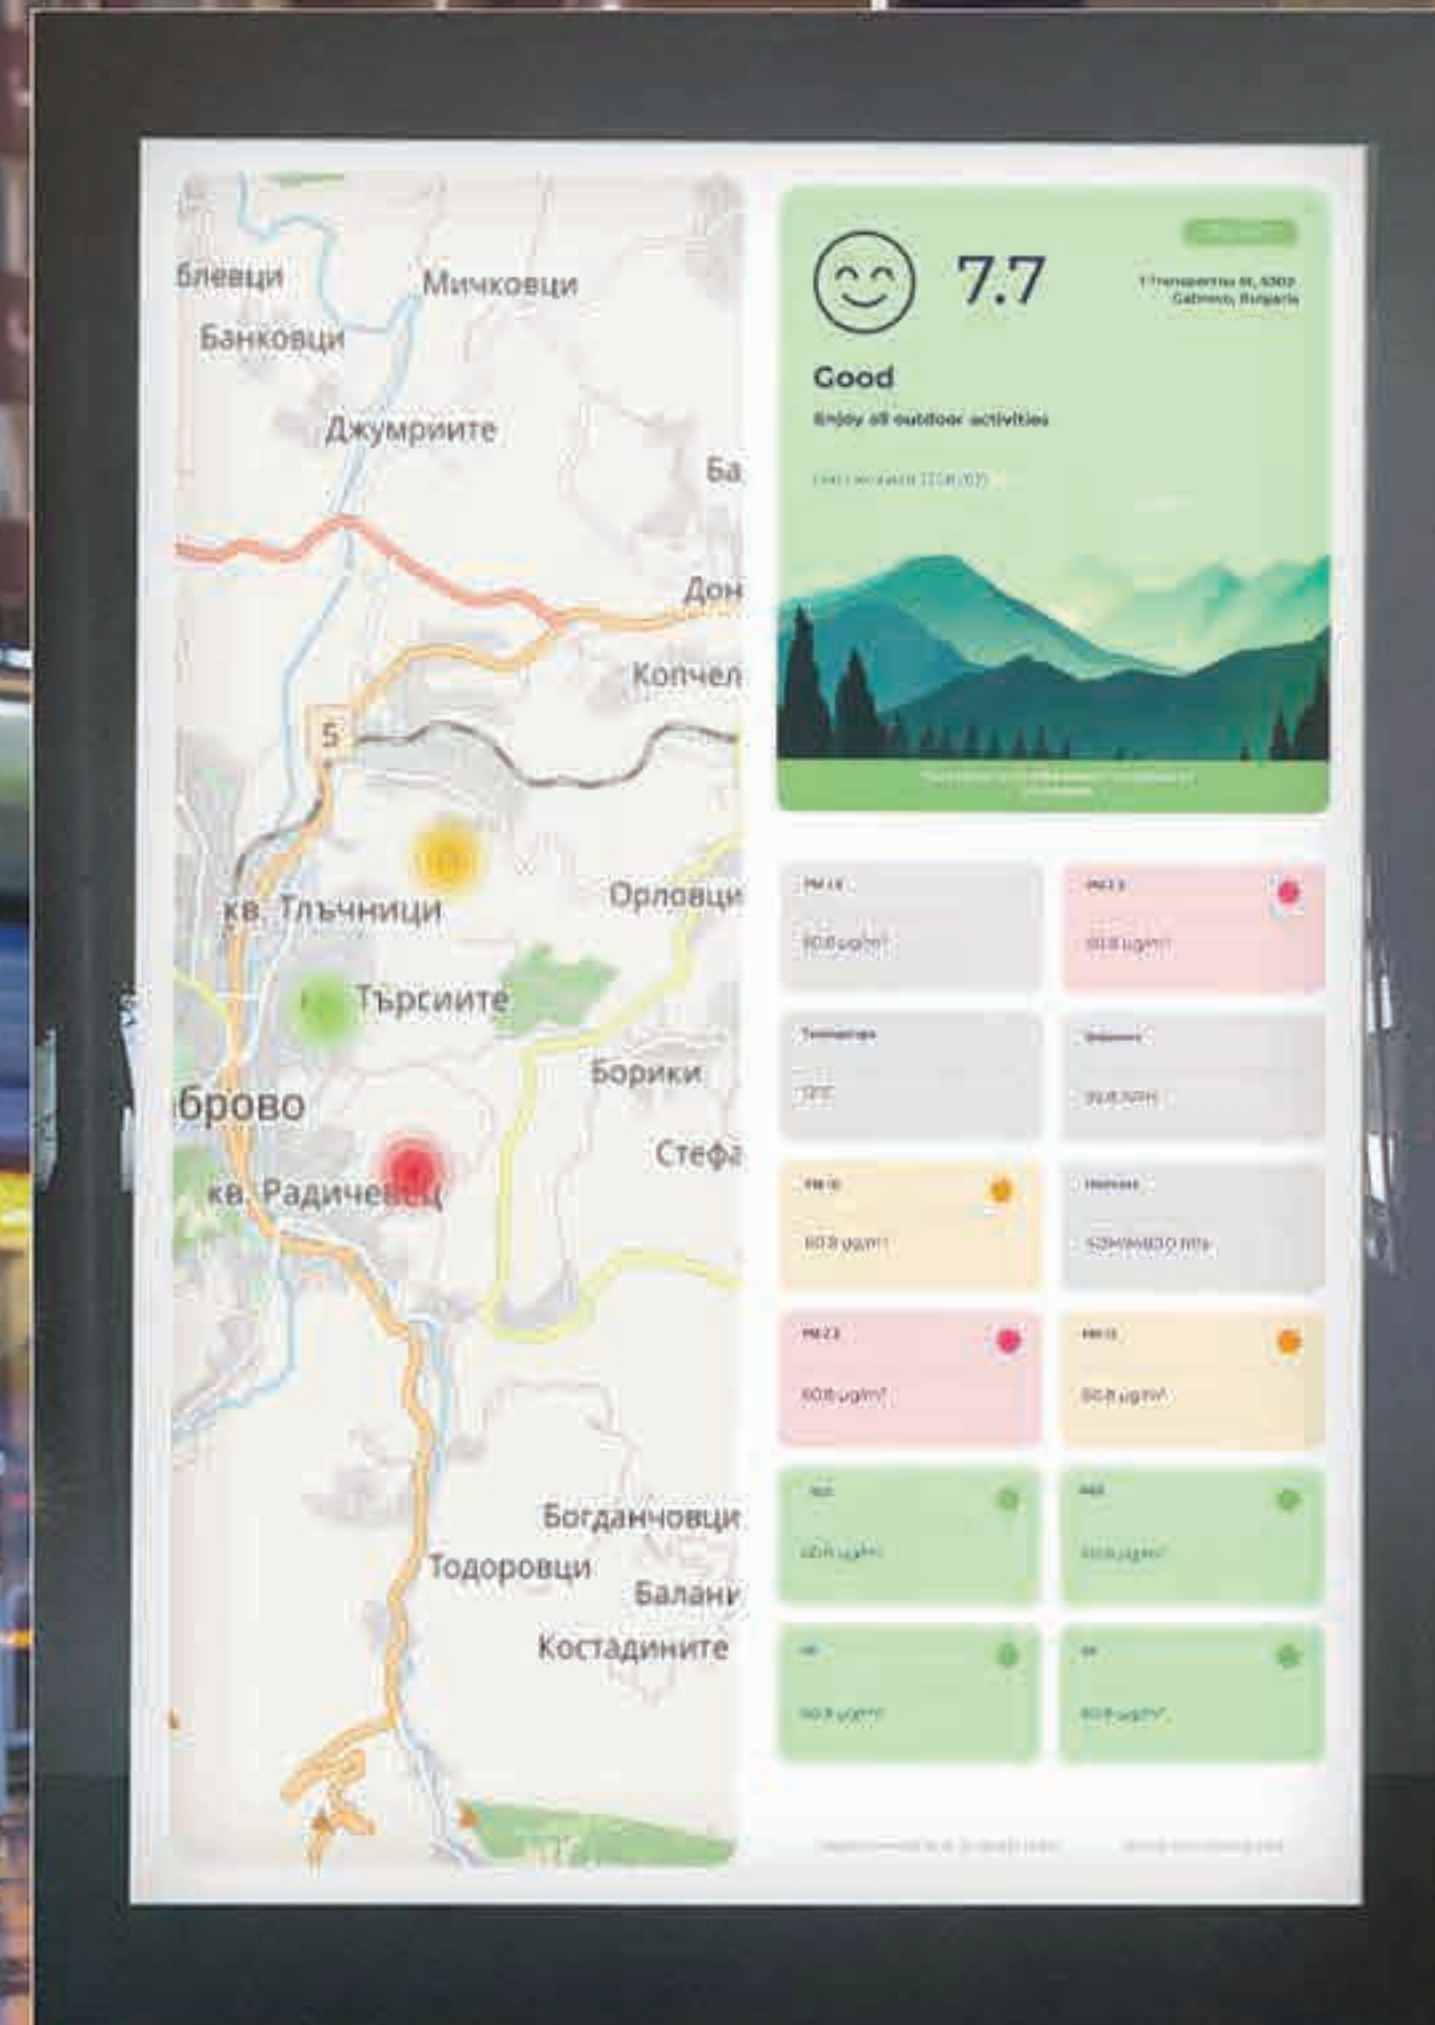

- ✓ Modern apps for visualizing any city's data
- ✓ Keeping citizens engaged with real-time information

- ✓ Creating social engagement among all groups
- ✓ Best practices of using digital technologies for making people's life better

Live broadcasting of smart city information on any type of indoor or outdoor displays for creating informational societies and keep citizens in sync with city's activities, status of the environment, transportation availability and many more...

Who we are?

A DEDICATED TEAM OF EXPERTS WITH FOCUS IN BUILDING NEXT GENERATION APPS AND DEVICES FOR THE INTELLIGENT CITIES OF THE FUTURE.

Dedicated hardware R&D and manufacturing teams

- Communication technologies: WiFi, LoRa, Mobile (LTE, GPRS, 2G, 3G, 4G etc.)
- Architectures: Xtensa, ARM
- Sensory: gas sensors, mics sensors, electrochemical sensors, lidar, radar and sonar components, IR, RFID and many others

INTERNALLY BUILD SOFTWARE

A fully operational service-oriented infrastructure with servers in Bulgaria, Seoul/South Korea and Frankfurt/Germany. High availability and scalability by using Data Endpoints where devices from the respective area transmit the data and the respectively the users fetch the data from the closest location.

Services, systems and software: Aggregation Service, Retrieval Service, Submission Service, Public Cloud Service, Cloud System, Messaging Service, Control Service, Management System, Open Data Service, Live Data Apps Service, Identity Service and more.

Software team

Databases

- Relational: SQL / MySQL / Postgre
- Key/value and object: Redis, MongoDB
- Light ORM Systems like Dapper

Technologies

- NET, including .NET Core, C++, Python
- MVC, REST & WebAPI, Microservices
- M2M (machine-to-machine) communication, OAUTH & JWT Auth, Identity Server, ML.NET

Project & Software Management

- Git, JIRA
